3. Performance

3.1 Performance and Scalability

Overview on the architecture
and design of the product
including performance and
scalability.
•

SmartExporter implements certain techniques that will ensure the stability during runtime. For example, a packed reading approach is used to avoid RFC timeouts.

For large data volume requests SmartExporter will use the SAP background processing system to schedule data collection jobs instead of blocking a dialogue work process.

SmartExporter separates relevant business process steps such as checking the request, estimating the request and executing the request.

3.2 Quality Assurance

Overview on Quality
Assurance procedures from
the vendors to assure that the
interface design and
performance consistently
conform to specified
requirements.

SmartExporter has been developed on five parallel major releases. Each development system is accompanied by a quality assurance system in which the developed objects are transported for full scale test drives.
